

Attachment A2 (b)

Acton Water District Lawsbrook Site Illustrative Solar PV Layout

Site description: The land was formerly a gravel pit. Currently mixed gravel with some scrub pine growth. It is estimated that 3 to 4 MW of PV can be installed on the site. The PV system layout given below is approximately 3.5 MW DC is given for illustration purposes, however, this layout meets several criteria required by the District including: 200 feet set back from the river, provides continued use of the existing access road, does not impact the existing pump house, minimizes tree clearing, land movement and grading.
